VERSION 5.0.13 RELEASE NOTES

These release notes keep you informed about the latest features and changes available in release v5.0.13 of ParishSOFT Family Suite.

Contents

ParishSOFT Family Suite v5.0.13 Release Notes__last updated October 11, 2023

What's New in Version 5.0.13

Religious Education

Students & Volunteers

Enrollment Date Columns Added to Student Export File

Per customer request, we added the following columns to the export file generated on the **Students** tab:

- **Enrolled Date**: shows the date the student enrolled in the class shown in the **Class** column.

- **Unenrolled Date**: shows the date the student unenrolled from the class shown in the **Class** column.

In the Excel file, the newly added columns are referenced as letters **E** and **F** and are located between the **Class** and **Grade** columns.

Registration

Typo Corrected in the Confirmation Email Sent to Online Registrants

We corrected a typo in the confirmation email sent to online registrants: the word "sent" was changed to "send."

Reports

More Student Information Now Available to Staff in the Roster CSV Export

To improve the usability of the **Roster** report, we added the following information, pulled from the student's **Family Directory** record:

- Family's primary phone number
- Family's emergency phone number
- Father's cell phone number
- Father's work phone number
- Mother's cell phone number
- Mother's work phone number
- Responsible adult's cell phone number
- Responsible adult's work phone number
- Family's address

Note that if a field is empty in the export file, it means that the corresponding field in Family Directory has no data.

Issues Resolved in Version 5.0.13

Family Directory

Member Details

Fixed: Imported Members' Contributions Not Being Transferred to New Family

In **Member Details**, after the user imports a member into another family, the member's contribution records are not being transferred as expected. They remain instead in the former family's record.

Tuition

Invoices

Fixed: 'Enrolled Classes' Dropdown List on Newly Created and Edited Invoices Sometimes Empty

On newly created and edited invoices, when the user selects the **Include students on invoice** option, the **Enrolled Classes** dropdown list associated with each selected student is sometimes missing classes offered in the selected term.

Development Manager and Offering

Funds

Fixed: Some Fields on the Goals Tab Overlap When the Zoom Level Is Increased

On the **Goals** tab in the fund record, when the user adds or edits a goal and then increases the zoom level, some of the input fields overlap. Depending on the zoom level, overlapping is experienced on all device types.

Pledges and Batches

Fixed: Legibility of Details for Multiple Active Pledges Improved

When the user creates a pledge that the system identifies as a potential duplicate, an alert is displayed followed by a list of active pledges for the user to evaluate as potential duplicates. To make the active pledge details easier to read, we lightened the list's background color to improve legibility of the text.

Administration

Manage Staff

Fixed: Cannot Remove a Non-Primary Position from an End-Dated Staff Assignment

The system generates an error when the user tries to remove a non-primary position from an end-dated staff assignment.
