Issues Resolved in Version 5.0.8

Religious Education

Age Range Filter Ignored in Registration Forms Report

Previously, the system ignored the **Family Member Age Start** and **End** filters in the setup for the **Registration Forms Report**. As a result, the printed report included all members of a family regardless of the age range specified. We fixed this issue. The age range filter now correctly filters by age so that the right family members appear in this report.

Formatting Issues Experienced When Printing a Registration Forms Report

Customers reported formatting issues when printing the **Registration Forms** report. We redesigned this report by changing some of the field alignments and shortening certain field names. We also expanded field lengths to accommodate longer text entries and to prevent text wrapping.
